Outline

- What is Reference management software?
- EndNote X7 (Desktop OR Online)
- Comparison of reference management software

Part 1

- What is the Reference management software?
- What can it be used for?

Definition

❖ Reference management software

❖ Citation management software

❖ Personal bibliographic management software

SAME

- ❖ software for scholars and authors to use for recording and utilising bibliographic citations (references) as well as managing project references either as a company or an individual.
- ❖ Once a citation has been recorded, it can be used time and again in **generating bibliographies**, such as lists of references in scholarly books, articles and essays. The development of reference management packages has been driven by the rapid expansion of scientific literature

- ❖ These software packages normally consist of a **database** in which full bibliographic references can be entered, plus a **system for generating selective lists of articles** in the different formats required by publishers and scholarly journals.

Modern reference management packages can usually be **integrated with Microsoft word processors** so that a reference list in the appropriate format is produced automatically as an article is written, reducing the risk that a cited source is not included in the reference list. They will also have **a facility for importing the details of publications** from bibliographic databases.

EndNote X7 Desktop

- ❖ Install EndNote X7 in the computer

- ❖ Create the library

- ❖ Import references

- ❖ Cite While you write

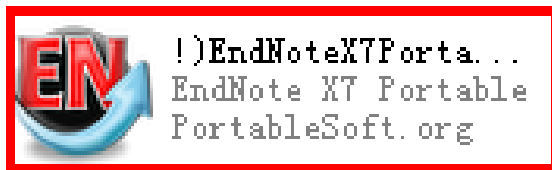

Install

- ❖ First Download the Install pack from **AIKE** platform.

Install

- ❖ After you download, Extract the package, then double click " !)EndNoteX7Portable.exe "

atl100.dll
10.0.40219.325
ATL Module for W...

Configure
EndNote.exe
EndNote Configur..

❖ After install, please run “EndNote.exe”

Start EndNote X7

Getting Started with EndNote

Learn about EndNote

Learn about the new features in this version of EndNote, and browse the help file.

A guided tour is available in the EndNote manual and Getting Started Guide pdf files bundled with the program.

Create a new library

If you're ready to get started, your first step should be to create a new EndNote library.

Open an existing library

Open an existing EndNote library and get started immediately.

Close

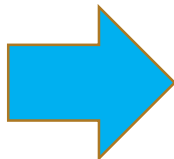

Create a library

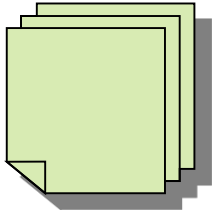

My Library.enl

Bibliography

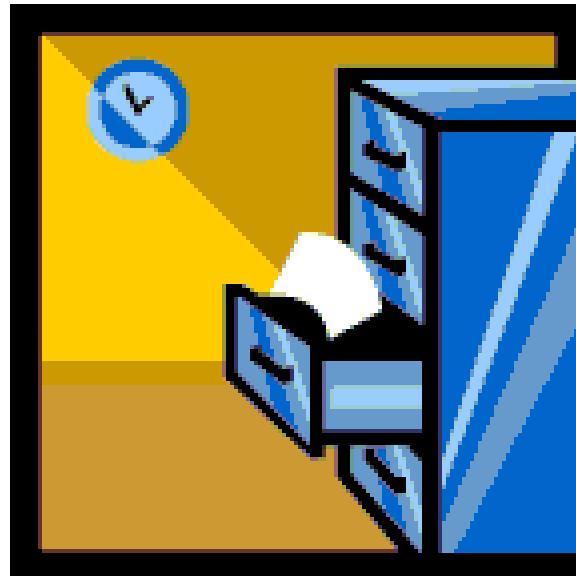

Create the library in EndNote X7

The EndNote library

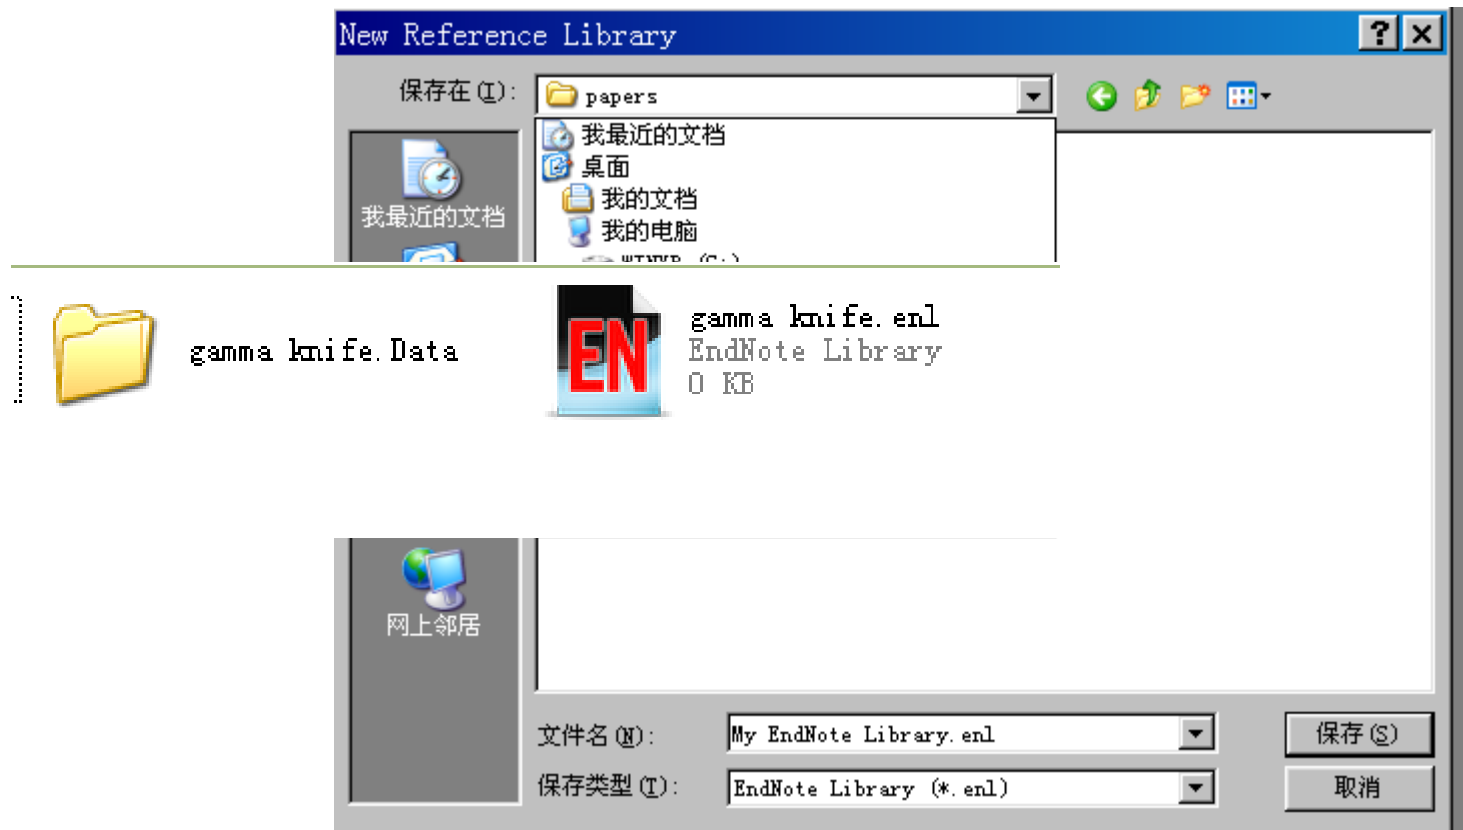

❖ What is an EndNote library?

- An EndNote library is like a file cabinet. Just as a file cabinet holds many files, one Endnote library holds many references on one subject. In Fact, it is a personal database.

Create My Library

- ❖ Create a new library and save it in your computer

EndNote X7

The screenshot shows the EndNote X7 interface with several key components highlighted by colored boxes and labels:

- Display Mode:** A green rounded rectangle highlights the left sidebar containing library and group lists.
- Menu:** A purple rounded rectangle highlights the top menu bar.
- Toolbar:** A blue rounded rectangle highlights the toolbar with various icons for file operations and search.
- Tab Pane:** A blue rounded rectangle highlights the search and filter tabs at the top of the main workspace.
- Groups Pane:** A blue rounded rectangle highlights the left sidebar, specifically the 'My Groups' section.
- References List Pane:** A yellow rounded rectangle highlights the main workspace area containing a list of search results.

The interface includes a menu bar (File, Edit, References, Groups, Tools, Window, Help), a toolbar with icons for file operations, and a search bar. The left sidebar shows a tree view of libraries and groups. The main workspace displays a search results table with columns for Author, Year, Title, Journal, and Page.

Import references to your library

Import References

Four ways to import references to an EndNote library:

- 1. Import from external databases using filter**
- 2. Online Search**
- 3. Import PDF file**
- 4. Input references manually**

- ❖ Many databases can export individual document citations to EndNote.
- ❖ For Example: **ScienceDirect** , **PubMed**, **SCI-E**

❖ Eg 1: Please retrieval the articles about using gamma knife to treat cancer in ScienceDirect. And Import some citations to EndNote.

Reference 1 4

Ha, S., et al. (2000). "Evaluation of docking/scoring approaches: a comparative study based on MMP3 inhibitors." *J Comput Aided Mol Des* 14 (5): 435-448.

An increasing number of docking/scoring programs are available that use different sampling and scoring algorithms. A reliable scoring function is the crucial element of such approaches. Comparative studies are needed to evaluate their current capabilities. DOCK4 with force field and PMF scoring as well as FlexX were used to evaluate the predictive power of these docking/scoring approaches to identify the correct binding mode of 61 MMP-3 inhibitors in a crystal structure of stromelysin and also to rank them according to their different binding affinities. It was found that DOCK4/PMF scoring performs significantly better than FlexX and DOCK4/FF in both ranking ligands and predicting their binding modes. Most notably, DOCK4/PMF was the only scoring/docking approach that found a significant

47% 0.2K between predicted score of the docked

Import References

Four ways to import references to an EndNote library:

- 1. Import from external databases using filter**
- 2. Online Search**
- 3. Import PDF file**
- 4. Input references manually**

To import a PDF file:

- ❖ Open the library into which you want to import the references.
- ❖ From the File menu, select **Import** > File to open the Import File dialog.
- ❖ Click the **Choose** button to locate and open the file you want to import from your hard drive.
- ❖ Select the needed PDF file, and then click Open.
- ❖ Select PDF from the **Import Option** list, then click the “import” button.

Abstract

Pituitary tumors are common in the general population. Since neuroimaging techniques have improved, pituitary tumors are more often diagnosed incidentally. About 16.7% of the general population show changes in the pituitary gland. Predominantly, pituitary tumors are benign pituitary adenomas. Pituitary carcinomas or aggressive pituitary tumors are extremely rare. They might develop from benign adenomas. New genetic and epigenetic abnormalities help us to understand pituitary tumorigenesis and might lead to therapeutic targeting drugs in the future. Microadenomas (1-1 cm) can lead to visual field disturbances, compression of cranial nerves, hypopituitarism, and infiltration of the cavernous sinuses. The functional status of the pituitary tumor is important. About half to one third of all pituitary tumors are non-functioning pituitary adenomas. The other pituitary tumors show a specific pattern of hormone secretion. About 25% to 41% of all pituitary tumors are prolactinomas, accompanied with production of growth hormone represents 10% to 15% of adenomas. Cushing's disease with production of adrenocorticotropic hormone accounts for 10%, and other hormonal characteristics are less common. Transphenoidal resection and total adenoectomy are desirable. Radiotherapy has enriched the surgical treatment options. Surgical treatment is the intervention of choice except for prolactinomas, where pharmacological treatment is recommended. Pharmacological treatment consists of dopamine agonists such as cabergoline and somatostatin analogues that include octreotide and pasireotide; levodopa is of theoretical interest while paradoxine, prolactin-receptor-antagonists are not clinically useful. In acromegaly, pegvisomant is a further treatment option. Temozolomide should be considered in aggressive pituitary tumors. In general, pharmacological options developed recently have extended the repertoire of treatment possibilities of pituitary tumors.

Recent advances

Epidemiology
Pituitary tumors are common in the general population. In 16.7% changes in the pituitary gland can be detected [1]. Since neuroimaging techniques have recently improved, pituitary tumors are more frequently diagnosed incidentally.

Usually, pituitary tumors are assigned as primary tumors of the central nervous system (CNS) and contribute to 5% to 20% of all primary CNS tumors [2]. In 55% of cases, pituitary tumors occur sporadically. Only in 5% may a familial genetic background be assumed, e.g. as part of Multiple Endocrine Neoplasia (MEN) Type 1, Carney's

Complex (CNC), or Familial Isolated Pituitary Adenoma (FIPA). In MEN1 syndromes, pituitary tumors occur alongside (retro-) pancreatic tumors, parathyroid hyperplasia, lipomas, and angliofibromas. This autosomal-dominant syndrome contributes to 2.7% of all pituitary tumors [3].

In most cases, pituitary tumors are benign adenomas. Pituitary carcinomas are extremely rare, and in these cases the assumption is that they are former benign adenomas that have undergone additional genetic mutations [4]. These changes induce an invasive tumor progression and the development of metastasis, mainly into the brain or spinal cord. Distant metastasis can be found in the liver, lung, or lymph nodes.

Import References

Four ways to import references to an EndNote library:

- 1. Import from external databases using filter**
- 2. Online Search**
- 3. Import PDF file**
- 4. Input references manually**

Input references manually

The screenshot shows the EndNote X7 interface. The 'References' menu is open, with 'New Reference' highlighted. The menu options include: New Reference (Ctrl+N), Edit References (Ctrl+E), Move References to Trash (Ctrl+D), Go To... (Ctrl+J), Copy References To, E-mail Reference, File Attachments, PDF Viewer, Find Full Text, Find Reference Updates..., URL, Figure, Next Reference (Ctrl+Page Down), Previous Reference (Ctrl+Page Up), Show All References (Ctrl+M), Show Selected References, Hide Selected References, Record Summary..., Find Duplicates, Restore to Library, Resolve Sync Conflicts..., and Empty Trash.

The main window displays a list of references with columns for Author, Year, and Title. The references are as follows:

Author	Year	Title
P. C.; Rimlinger, M.; Broggio, D...	2017	Development and test

❖ File Attachments, Figure, Research Notes

The screenshot displays the EndNote X4 software interface. The window title is "EndNote X4 - [Xu, 2010 #28]". The menu bar includes "File", "Edit", "References", "Groups", "Tools", "Window", and "Help". The "Reference Type" is set to "Journal Article". The interface shows a list of fields for a reference entry:

- Author:** Xu, Fei
- Year:** 2010
- Title:** Implementation of an electronic resource assessment system in an academic library
- Journal:** Program: electronic library and information systems
- Volume:** 44
- Issue:** 4
- Pages:** 374-392
- ISSN:** 0033-0337
- DOI:** 10.1108/00330331011083257

Below the fields, there is a "Research Notes" section with the following text:

On January 5th 2011 from 9am GMT, we will be undertaking essential site maintenance which will result in a period of downtime of no more than 1.5 hours. We apologise for any inconvenience this might cause. We will make every effort to keep downtime to a minimum and will seek to reinstate the website at the earliest opportunity

The "File Attachments" section is highlighted in grey and shows a PDF icon with the text "Implemen... of an el..." below it.

Find Duplicates

The screenshot shows the EndNote X7 application window with the 'References' menu open. The 'Find Duplicates' option is highlighted. The main window displays a list of references with columns for Year, Title, Rating, Journal, Last Updated, and Reference Type. The 'Find Duplicates' menu is open, showing options like 'Record Summary...', 'Find Duplicates', 'Restore to Library', 'Resolve Sync Conflicts...', and 'Empty Trash'.

Parasitology Research

poultry, a disease of economic importance in turkeys and chickens characterized by severe enterohepatitis. Coinfections with *Tetratrichomonas gallinarum* (Lee 1972) and *Blastocystis* spp. (Lee 1970; Stenzel and Boreham 1996),

two other widespread protozoa, are found quite often in birds infected with histomoniasis. The clinical relevance of these infections is discussed controversially (Lee 1964; Lee 1970; Lee 1972; Norton 1997).

Currently, no pharmaceuticals for the prophylaxis of histomoniasis are available in the European Union and several have been banned from the market (CEC 2002). As a consequence, the incidence of the disease in the last few years has

aware of patients' treatment assignments, reviewed the data to determine which patients had reached study end points; this committee also evaluated safety. The study protocol was approved by the Nanfang Ethics Committee, and all subjects provided written informed consent. A study period of three years was chosen on the basis of the results of previous trials involving patients with nondiabetic chronic kidney disease, which suggested that a three-year follow-up is adequate to assess efficacy^{1,2}
